

Instrument Track Presets

When adding an instrument track you have the option to check “Browse Presets”. When this is checked you will be able to sort through patches on all of your VST 3-compatible plug-ins.

The Viewer will allow you to sort patches by Name, Instruments, and Category. For example you can sort by Bass and all of your plug-in instruments with sounds categorized by Bass will be listed first.

The Filter section is a quick way to organize patches by several categories and sub categories. For example, you can have the Viewer only display Ethnic and Musical FX patches.
