

Nuendo - Importing XSend projects from Liquid

For Liquid users, XSend provides a means to export a Liquid sequence directly to a Nuendo workstation either on the same machine, over a network or via portable media such as DVD-R. The XSend options and features are available only if XSend is installed on your computer. You can either install XSend during the Nuendo installation process or at a later point in time using the XSend installer supplied on the Nuendo program DVD. Also, make sure the XSend plug-in is activated in the Plug-in Information dialog.

There are three steps in the XSend importing process.

1. You must designate the XSend Incoming folder by selecting the XSend preferences from the Nuendo File menu.

A dialog will appear allowing you to browse your system to select a folder where exported Liquid projects will be stored.

2. Export the Liquid project to the Nuendo system.

This can be done directly over a network if the two systems are connected by one. No file sharing is needed. All file transfers are handled by XSend. Refer to the Liquid system's documentation for more information on how to do this. You may also export the sequence to portable media such as DVD-R or CD-R discs for transfer when no network is available.

3. From the File menu's Import submenu, choose "XSend..." Navigate to the exported Liquid sequence which will be an .XSD file type.

4. You will be asked if you wish to create a new project. Choose "Yes" if you want to import the XSend sequence into a blank project. If you choose "No," the imported sequence will be appended to the currently active project. The new audio tracks will appear below the lowest track or channel in the project. In either case, both audio and video files can be included in the XSend sequence, providing a convenient means to receive entire projects from Liquid users.
