

Adjusting Colors in Wavelab 6

Wavelab 6 allows different elements in the wave window to be adjusted such as the color of the wave or background for example. These things can be changed quick and easily within the wave window.

1. Right click in the wave window and select Colors.

2. The sub menu for Colors gives you many options for elements you may change the color for.
3. Once you click on an element in the sub menu a color selection panel will be displayed. This window will allow you to choose a new color for the element. Once you have made a color selection click the OK button.
