

Undocking or Floating Control Panels in Wavelab 6

In Wavelab 6, you can take any of the control panels that are at the top of the window and move them to create a custom workspace.

In this example, the transport bar will be moved. To move the transport bar, move the cursor to the beginning of the transport control panel. Fig. 1

Fig. 1

Then hold down the left mouse button and drag it to another space inside the Wavelab 6 window. Fig. 2

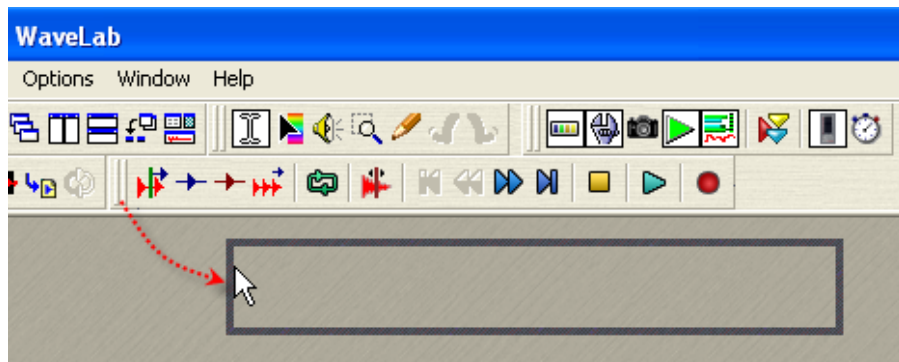

Fig. 2

Then release the left mouse button and the transport control panel will transform into its own window. Fig. 3
